

Wynsoft™ Auditor

The Wynsoft™ Auditor Module is flexible to support even the most demanding quality control aspects of your operations. Whether the need arises for outbound, inbound or inventory control quality checks, the Auditor is ready to maximize the quality of your inventory control operations. The Auditor Module in conjunction with the Transporter and Convey Modules moves inventory to operators who perform the quality checks with visualization for more effective and reliable counts.

As with other modules, PLC code is utilized for movement of the product while the software aspect of the module compiles and stores statistical data which is ultimately used by the Visibility Module to generate quality variance reports and business intelligence information.

Optimized Solutions

- Interacts with other modules to balance workload between audit workstations
- Provides and analyzes captured data to the visibility module for use in business intelligence reports

Our Auditor Module features:

- Inbound vendor compliance
- Outbound customer order validation
- Cycle counting
- Blind counts
- Visual cues

The Wynsoft™ Auditor Module ensures the managed inventory within your operation is accurate, maximizing service levels and minimizing the potential for reworks.
