

Wynsoft™ Communicator

The Wynsoft™ Communicator Module facilitates the interaction between provided Wynsoft modules and external solutions such as WMS, TMS, YMS, LMS and others. For efficient communication between the various solutions we define and provide industry standard formats and methods for communication. Whether the need is for daily transport of information or real-time up to the minute interaction, the Wynsoft™ Communicator Module is designed to handle the load.

Wynsoft™ Communicator supports the various standard methods of data transport such as TCP/IP, File Transfers, Sockets, RPC, MQ, BizTalk, Direct Database, Web Services, and more.

Stable and Proven Interface

Native support for Sockets, RPC, MQ, BizTalk, Direct Database, Web Services, and more

Configurable Updates to Host

- All status changes can trigger a message
- Near real time or batch updates

Our Communicator Module features:

- Server-based software
- Flexible and Robust Communication Scheme
- Configurable Message Types and Fields

The Wynsoft™ Communicator Module is ideally suited to handling communications between the Wynright Warehouse Control System (WCS) and your Warehouse Management System (WMS).
