

Wynsoft™ Decant

The Wynsoft™ Decant Module supports the movement of inventory from one storage medium to another for efficient putaway and storage. It is similar to a receiving process but does not require the product to be new to the system. A typical use of this module would be to prepare inventory for selection by moving product from a pallet to a tote or other style container better utilized by conveyor for the selection process.

Our Decant solution ensures efficient cube utilization of your storage medium and catches issues before they become a throughput problem. In addition to optimizing the module also records movement of inventory and provides the archival of data for subsequent examination and interrogation by the Wynsoft™ Visibility Module.

Optimized

- Interactive visualization with operator for peak efficiency
- Deliver to decant from conveyor, lift truck, or other automated or manual process

Flexible Application

- Pallet to carton or tote
- Tote or carton to pallet
- Pick pallet from AS/RS or reserve
- Manual or robotic depalletization

Our Decant Module features:

- The ability to interface with the WMS and other modules to assign SKU's to totes or cartons
- Communication with other support modules to manage the release of product back into inventory
- Supports live roller, AutoRoll+® MDR, belt, merge tables, sortation equipment, induction, cranes, etc.

Including the Decant Module with your WCS solution provides you with the ability to consolidate or prepare inventory for the most effective handling and storage within your operations.
