

Wynsoft™ Labeler

The Wynsoft™ Labeler Module handles the tasks of creating and adding labels and documentation both inside and outside your inventory shipping medium. For traditional exterior Print and Apply labeling and document insertion you can be assured that the correct information is applied. Working in conjunction with other Wynsoft™ modules, Labeler provides information such as parcel rating, destination, packing lists, marketing literature and much more to the outbound process for your customers.

Our software module is easily configured to work with a wide range of print and apply machines and premium print engines. Labeler supports everything from high speed top or side apply functions to linerless and dual label applications. Combining the best of breed equipment with the most efficient routing solutions creates the most effective throughput for your operations. Labeler also archives data for subsequent examination and interrogation by the Wynsoft™ Visibility Module.

Useful Statistics

- Throughput counts
- Scanner statistics
- Applications status
- Detail carton history
- Label verification
- Communication status
- Alert history

Flexible

- Top, front, side, and rear applications solutions
- Supports Panther, Weber, Avery, Markem and all leading label applications
- Drives Zebra, Sato, and leading print engines

User Friendly

- Dashboard technology ensures information is provided in an easy to understand format
- Manual override for non-standard or non-conveyable products and reprinting damaged labels

Our Labeler Module features:

- Reliable carton tracking and label verification
- Real time statistics and information
- Multiple label formats
- Superior accuracy
- Useful alerts and feedback
- Compatibility with all major label applicators and print engines

Wynsoft™ Labeler works with the conveyor control system and rating systems to identify, process, label, and verify containers as they pass through the system.
