

Wynsoft™ Visibility

The Wynsoft™ Visibility Module utilizes stored data from other Wynsoft™ Modules as well as external software and converts it into useable information to expose statistical results that help guide your operations to their peak efficiency. Visibility provides real-time feedback to staff, empowering them to quickly react to trends and affect change for maximum throughput. Combining lightning fast access to stored data along with a web based flexible design ensures that the right information gets to the right destination at the right time.

Wynsoft™ Visibility is designed and developed with the most efficient technology techniques to ensure rapid response and flexible access so your operators will begin to discover the value from their very first interaction with the system and will easily create the output to their needs and not a generic one size fits all set of reports. Visibility utilizes data from the other Wynsoft™ Modules and turns that data into valuable information.

Useful Statistics

- Scanner statistics
- Sortation statistics
- Max/Min carton length
- Full Line occurrence counts

- Detail carton and alert history
- Zone activity
- System information

Business Intelligence

Business intelligence and reporting solutions for monitoring the throughput and operational efficiencies of your facility.

Alerts and Real-time Monitoring

See the health of the entire system in one glance with optional Guardian 24/7 web-based monitoring system.

Our Visibility Module features:

- Intuitive dashboard design
- Real time statistics and information
- Graphics and alerts (optional)
- Enhanced troubleshooting diagnostics
- Data/trend analysis

The Visibility Module is an essential part of Wynsoft's™ modular software solution. It effectively monitors operations and provides forward looking information for continuous improvement and actionable alerts.
